

BIOREPEEL

BioRePeel utilizes advanced biphasic technology to exfoliate, regenerate, and repair the skin. By penetrating the skin's superficial layer, BioRePeel stimulates collagen and elastin production, improving skin texture, minimizing imperfections, and boosting hydration. BioRePeel requires little to no downtime, with minimal to no shedding and immediate results that continue to enhance over the following weeks.

PRE-TREATMENT

- You are NOT a candidate for this treatment if you:
 - are pregnant or are breastfeeding
 - have an aspirin, hydroquinone, or phenol allergy
 - have used oral isotretinoin (Accutane) within the past 6 months
